

## Press Release

Montpellier, September 5th, 2017

### RG System increases its international influence with DCC Nederland

The leading SaaS software editor of IT Management solution RG System announces the signature over summer of a new distributor partnership with the Dutch company DCC Nederland.

This partnership fits in with RG System's strategy to develop in Europe in 2017, starting with the Benelux area, already partly covered by other local partners.

The choice of DCC Nederland has been driven by the companies' common goal: customer satisfaction. Both DCC Nederland and RG System value human relationship and are making their best to provide the end-user with a top quality solution to manage their IT infrastructure.

For DCC Nederland, distributing RG System's solutions will be the occasion to provide its customers a new SaaS RMM solution to monitor their IT infrastructure, backup and restore their data, and secure their critical assets. Moreover, DCC Nederland customers' will be able to benefit from the experience of a long time global player on the IT management market that stands out thanks to its agility, its trustworthy partnerships and the focus made on intuitive and affordable solutions.

For Grégory CLADERA, RG System's CEO, *"our current goal is to develop in Europe and especially in The Netherlands to cover the whole Benelux area. This is what we are going to achieve thanks to DCC Nederland, but more than increasing market shares, we are gaining a professional partner we are already delighted to work with. We are very confident about this new relationship to come and the common vision we share. We couldn't have found better partners to start on this new market!"*

*"We have been very successful with Remote Monitoring and Management solutions in the past", says Hans ROODENBURG, Business Developer at DCC Nederland. Unforeseen circumstances forced DCC back in 2015 to focus on different areas but the RMM business is still very interesting. "We are very well capable of working with resellers and managed services providers. We can assist in a phase where they are considering to start offering managed services, and we can also help them growing and further developing their services. RG System is at the moment the most interesting and most advanced editor of a complete IT management solution. Contrary to some other editors who offer non flexible tools that are sometimes acquired and not ready to be integrated, RG System has demonstrated how agile and customer oriented their market approach is. And we are determined to make it a great success in The Netherlands".*

RG System solutions are available as a [30 days free trial](#) on DCC Nederland website.

***About RG System***

RG System is the software editor of an all-in-one solution that gathers 3 essential dimensions of IT management: RG Supervision, RG Security and RG Backup. RG System offers a network management solution as a SaaS mode that can drive and automate monitoring, safety and backups/restorations. From one unique Dashboard, RG System grants a centralized view on all the components of your infrastructure and alerts you if you should worry about their health status and therefore a corrective action is required. That way, your equipment is monitored, kept safe and your data backed up. RG System stands out thanks to its Agile Scrum development method, its participative roadmap and its client driven philosophy. We make sure to design innovative solutions and to build long term relationship with our customers.
